

Ritesh Bhoskar

Full Stack Engineer

 riteshbhoskar7@gmail.com |  x.com/RiteshBhoskar7
 github.com/RiteshBhoskar |  linkedin.com/in/ritesh-bhoskar

Skills

Languages: TypeScript, Javascript, Golang, Python, Rust

Frontend: HTML, CSS, React, Gsap, Three.js, Tailwind, Motion, Recoil, Zustand

Backend: Next.js, Node.js, Express.js, Web sockets, NextAuth, PostgreSQL, Prisma, MongoDB

Technologies & Tools: Git, Github, Cloudflare, AWS, EC2, S3, Vercel, Redis, SQS, Docker

Projects

Mediso

[Live Project Link](#)

- Architected and developed a scalable web application enabling users to post and share their health issues, creating a community-driven ecosystem for healthcare concerns.
- Designed a filtering and access control system allowing doctors to selectively respond to issues they have previously treated, improving the relevance and effectiveness of consultations.
- Implemented a real-time upvoting system where patients can endorse issues posted by others, enabling prioritization of commonly faced health problems for medical attention.
- Tech Stack: Next.js, TypeScript, Web Sockets, Prisma ORM, PostgreSQL, Tailwind CSS, Vercel

Tech Wave

[Live Project Link](#)

- Developed a fully functional, responsive e-commerce platform with real-time product display, dynamic filtering, and smooth page transitions to deliver a seamless user experience.
- Integrated modular components for cart management, product detail viewing, and checkout processes, ensuring code reusability and maintainability.
- Leveraged modern web technologies to achieve high Lighthouse scores in performance, accessibility, and SEO, improving the product's visibility and usability.
- Tech Stack: Next.js, React.js, TypeScript, tRPC, GSAP, Tailwind, Framer Motion, Tailwind V4, Vercel

Design Cube

[Live Project Link](#)

- Engineered a minimalist portfolio website with dynamic transitions and modern animation effects to convey professionalism and creativity.
- Applied advanced CSS animations and micro-interactions to create a visually immersive user experience without compromising performance.
- Tech Stack: Next.js, React.js, TypeScript, Gsap, TailwindCSS V4, Vercel

Vercelike

[Live Project Link](#)

- Built a full-stack deployment platform mimicking Vercel, with GitHub integration, automated builds, and static site hosting via a custom frontend.
- Designed a modular microservices architecture for upload, deploy, and file serving, improving scalability and maintainability.
- Tech Stack: TypeScript, Node.js, Express.js, Next.js, AWS S3, EC2, Redis, SQS
